

The Reach Offering is a chance for you to give above and beyond! During Easter Season we take this additional offering to bless a select group of our local and global ministry partners to help meet specific needs.

Learn more about our 2026 Reach Offering recipients below:

Powerhouse Ministries, Folsom: [Powerhouse Ministries](#) recently acquired a new campus in Folsom that will house their crisis services and community meeting space - which is also where church services are held. While their property is secured, they are experiencing a significant, unexpected operational shortfall. A portion of the Reach Offering will go towards that shortfall so their ministry can continue without interruption.

EPC International Disaster Relief Fund: Donations to the [International Disaster Relief Fund](#) will be used to help alleviate suffering when needs arise around the world. Donations are forwarded to EPC World Outreach workers "on the ground" in affected areas, international ministry partners, or to other appropriate agencies and organizations at the discretion of EPC leadership. Currently, this fund is extremely low and international events are high. A portion of the Reach offering will help to increase this fund so that greater ministry can be accomplished and more needs can be met on a global scale.

Interserve: The Stocks, supported missionaries serving in the Middle East, lead the Audio Visual Center, a ministry that has produced theologically rich and culturally sensitive Christian media in local languages for over 40 years. Through hundreds of projects, the ministry has created a valuable library of audio, photo and video resources that can be reused in future outreach and discipleship efforts. Over time, this content has been stored across many external hard drives, making it difficult to organize, access and use efficiently. This server project will help consolidate and protect these materials, making them easier to store, retrieve, and build upon for future ministry. The Reach Offering will help purchase the equipment needed to build two enterprise-grade servers (one for reliable data storage and one for easy-access organization), allowing the Stocks and their team to continue creating and distributing media more effectively and efficiently.
