Finding the Best Seat for Your Worship Experience

We want every person who walks into our auditorium to be able to worship, hear clearly, and engage without unnecessary distraction. Because every room has unique acoustics, not every seat will sound exactly the same. The shape of the auditorium, the speaker placement, the distance from the stage, and even where you sit in relation to the room can all affect how loud, full, or clear the sound feels.

Our goal is not simply to make the room “loud.” Our goal is to create a worship environment that helps the room engage together. A fuller sound often helps people participate more freely, sing with confidence, and experience worship as something we are doing together rather than simply watching from a distance. At the same time, we recognize that people experience sound differently. What feels energizing to one person may feel too strong for another.

That is why we have created this seating guide. It is a simple way to help you choose a seat that best fits your personal comfort level.

Sometimes what feels like a volume issue may actually be a mix, room, or location issue. Certain seats may have more bass, more brightness, more vocal clarity, or more direct speaker coverage. So instead of assuming the whole room sounds the same everywhere, we want to help you find the area that serves you best.

Sound Zone Recommendations

1. Full Sound Zone
This zone has the most energy and intensity. You will likely feel the music more fully here, with stronger overall volume and a more immersive worship experience. This is a great area for those who enjoy a fuller, more energetic sound.

2. Balanced Sound Zone
This zone is designed to provide a strong but more even listening experience. You should still feel connected to the energy of the room, while also having a more balanced mix of music, vocals, and speaking. For most people, this will be the best overall seating area.

3. Comfort Sound Zone
This zone is recommended for those who prefer a lower-volume experience or are more sensitive to sound. You may still hear the music and message clearly, but with less intensity than other areas of the room.

A Helpful Note

If the sound ever feels uncomfortable, we encourage you to try a different sound zone the following week. A simple change in seating location can make a noticeable difference. Ear protection is also available for anyone who would find that helpful.

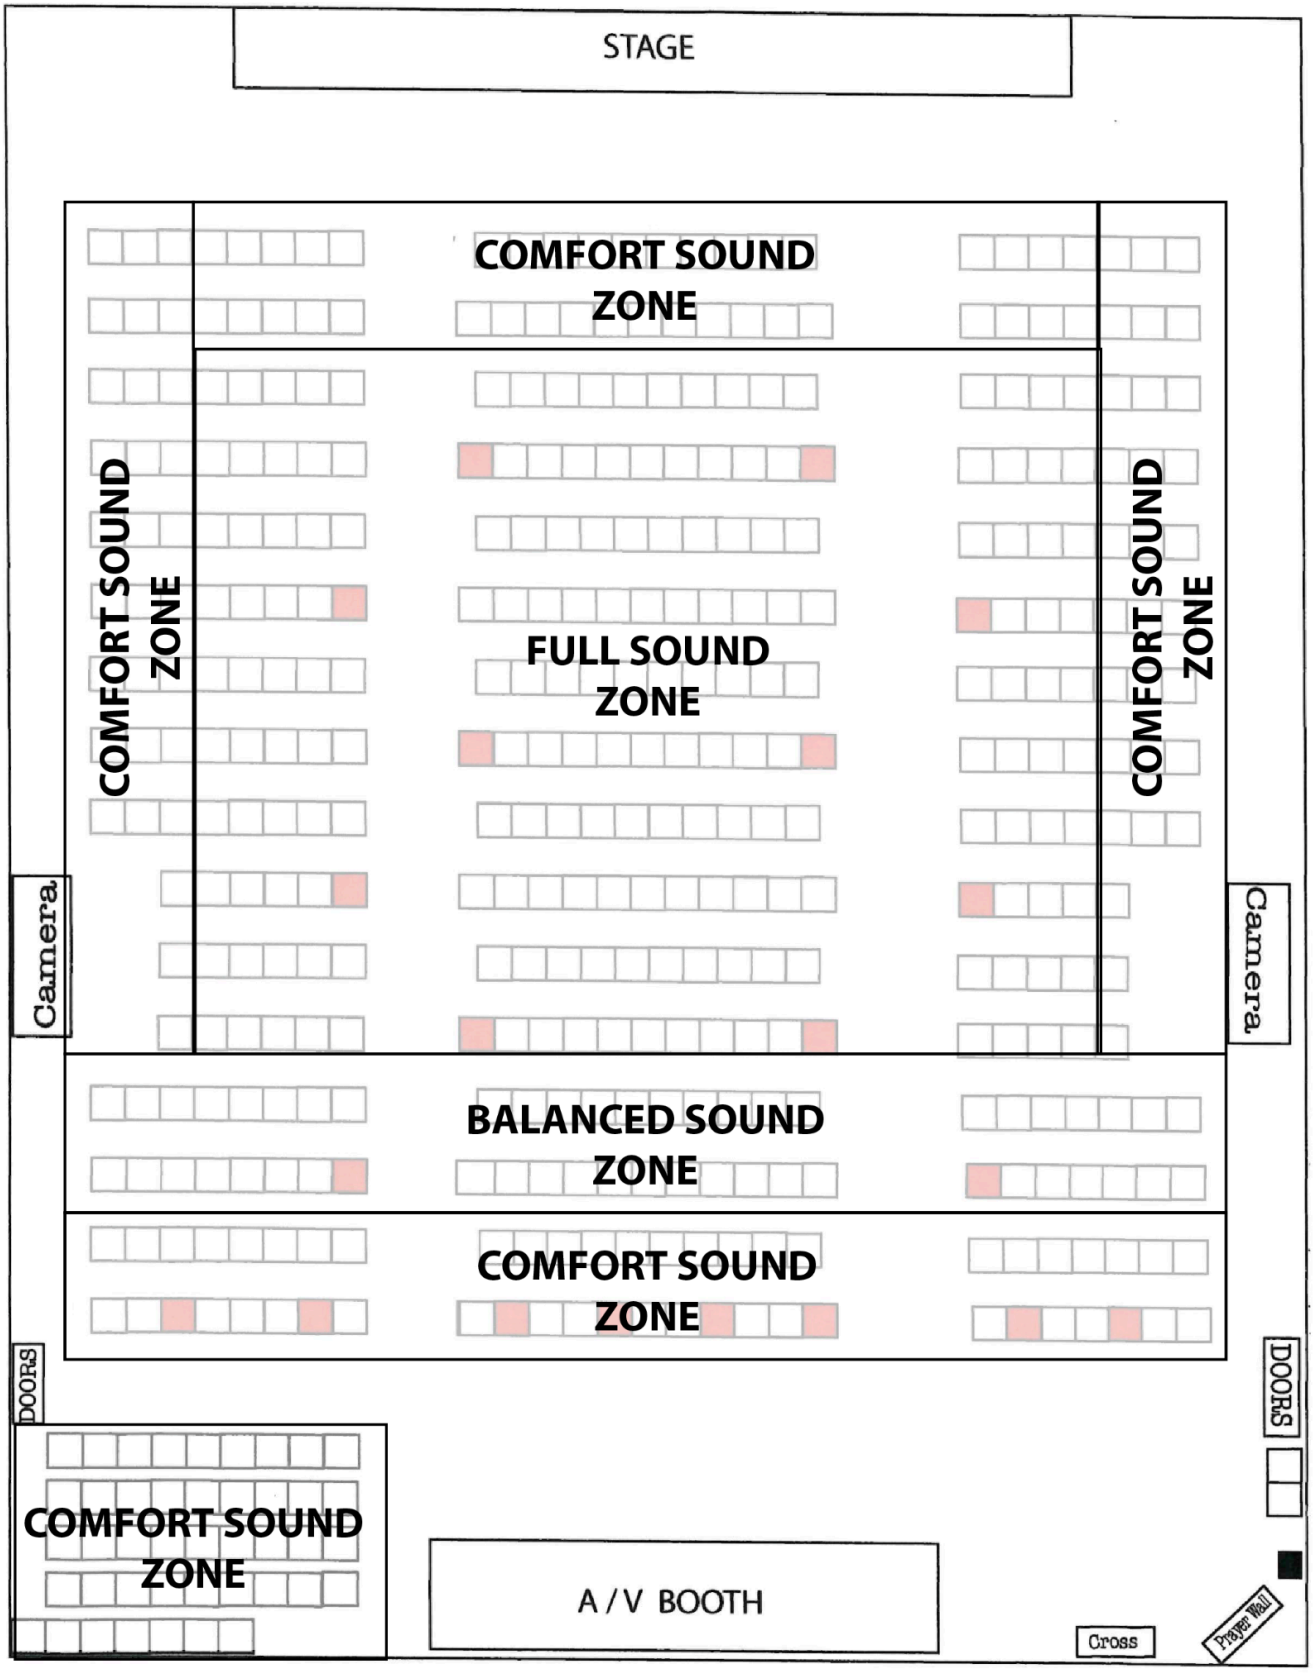

We are grateful for the teams who work hard each week to create a meaningful worship environment. Our hope is that this seating guide helps you find a place where you can worship, listen, and engage well.

I love worshipping together!
