

## End of Season Reminders for Wesley Acres Leaseholders

Please complete these checks before leaving for the season. Includes WATPI recommendations and park storage reminders.

### Trailer Reminders

- **Electrical breakers** WATPI recommends turning off all breakers when closing your trailer for the season.
- **Propane** Turn off all propane tanks at your site.
- **Air conditioning** Turn off air conditioning whenever you are away from the Park.
- **Smoke detectors** Check batteries before leaving to prevent low-battery alarms. Test detectors and check batteries again when you return in spring.
- **Window ventilation** Consider leaving a small window slightly open during the off season, if permitted by your trailer manufacturer's winter-storage guidance.

### Other Reminders

- **Secure outdoor items** Strong fall and winter winds can scatter belongings. Tie down BBQ and golf cart covers, secure plastic chairs and other loose items, and latch shed doors.
- **Golf cart storage** WATPI recommends fully charging the cart, disconnecting the charger for 30 seconds, then charging again. Add distilled water to batteries if applicable; disconnect red, black and blue cables; set the switch to TOW; turn the key off; release the brake and block the tires.
- **Boat lifts** Lifts stored at the boat launch must be removed by May 31st unless arrangements are made with the Park Manager. Contact the office to have your stored lift labelled.
- **Boats on lots** Boats cannot remain on lots year-round. Arrange alternative storage if your boat cannot go in the water at the start of the season.
- **Dock panels and loose pieces** Secure them well above the high-water mark, away from shore ice that can shift and cause damage.
